# INTRODUCTION

*Supplement 3* of the *Interplanetary Medium Data Book* contains a detailed discussion of a data set compilation of hourly averaged interplanetary plasma and magnetic field parameters. The discussion addresses data sources, systematic and random differences, time shifting of ISEE 3 data, and plasma normalizations. *Supplement 3* also contains solar rotation plots of field and plasma parameters.

*Supplement 3A* contains computer-generated listings of selected parameters from the composite data set. These parameters are bulk speed (km/sec), density ($cm^{-3}$), temperature (in units of 1000 °K) and the IMF parameters: average magnitude, latitude and longitude angles of the vector made up of the average GSE components, GSM Cartesian components, and the vector standard deviation (see original *Data Book* for discussion). The units of field magnitude, components, and standard deviation are gammas, while the units of field direction angles are degrees.

Identifiers of both plasma and IMF data sources are also listed (H = MIT IMP 7, J = MIT or GSFC IMP 8, L = LANL IMP 7/8, A = ISEE 1, C = ISEE 3).

Note that the data are listed in 1-day blocks and that days with no field or plasma data are omitted from the listings. For hours during which values are available for only an incomplete set of plasma parameters, values for the missing parameters are listed as zero.

# Data Listings
